Well, if you are getting old, count me in too. I find dx the old fashion
way, I turn the radio on. No internet connection in the shack, and no packet
either. Boy, I am old fashion.

73, and good hunting, Bill kc4atu

Michael: I'm afraid I'll have to agree with you on this whole concept: I'm from the old school , ie: If you don't hear'em you can't work'em !!!!!
in other words , in the 50's , 60's, etc. (before internet)
we did it the "hard way" and I had 1000's times more fun , etc that way.!!! this internet stuff is nonsense to the
"true ham operator" ..!!! thanks for the bandwidth!!!!

Are you a new QRP convert Mike? When the flux hits 85 and
everyday is a poor one for DX, some help is needed. This is hoped to be
the way it is done and is not an effort to start another worthless Yahoo
list. If the group does not use this list I can turn it off in about 5
minutes.

This entire concept of setting up skeds via a list is just one of the mundane ideas in recent years. Look guys, just turn your radio on and operate DX and quit trying to be so scientific about it. That is where the real fun is. Unless you have a very, very, inefficient antenna and the need to have a dx list. Go learn Propagation. Enough of the novelties.

john

I hear Morse code everyday at work ! I'm a technician at a Honda dealership, and every time I open the door on a Honda with the key in the ignition, the courtesy chime continually sends the letter "H" - didididit ! I have asked the factory reps if the Morse character H was deliberate and stands for Honda, but they just look at me and say something like "what is Morse code ?" I did talk with one of the factory tech line techs that was a ham about it, and he had never noticed it until I mentioned it, so he is looking into it.

Perhaps it's the difference between operating for operating sake, versus
collecting points and paper.

Kinda like QRP vs. QRO....different strokes for different folks.

> Darn. I guess I really am getting old. I like to play radio.

But if you were a "scheduler", you could earn awards AND have time
to play radio (g).

Doesn't this, along with Ms. Abernathy's comments kind of suggest the FCC
has already made up its mind?

Hey, y'all.
This thought hit me recently so, thought I would share.
Let's say BPL comes to my neighborhood (boo, hiss!)
We're about 200 feet from the (7200 volt?) overhead transmission line and
the transformer which supplies our residence plus that of one of our
neighbors.
My neighbor just has to have BPL and, naturally, I don't want that sort of
surround sound at my QTH.
I'd demand that the power co provide separate transformers. Mine would be
the one without the hf-vhf shunt or whatever it's called.
Wonder if I would be required to pay for the extra transformer...
Hope none of us has to deal with BPL at all but...if we DID...?
Please discuss...

By the way...for the past several days, I've had a steady s9 noise level(not
static crashes) on 80 meters(ant is tuned for 80 right now) and somewhat
lower on several other low bands.
Hope I'm not just paranoid, but I think I need to investigate...
Unless there's been something going on with our Sun, the low bands should be
nice and quiet with these cool, clear fall wx condx...

73.

I'm an old fart too. It is wrong in contests to have pre-scheduled contacts, and it should be wrong for everything else.

Am I the only one who disagrees with this whole concept?

I actually ENJOY the hunt - to me that's a big part of chasing DX QRP, whether
real DX (as n countries) or DX as in counties, grid squares, states, islands,
or whatever.

I don't understand why anyone would want to set up contacts via email schedules except for propagation studies.

Darn. I guess I really am getting old. I like to play radio.

...anywhere?

The recent US time zone question prompted me to remind everybody about this website:

<http://www.timeanddate.com/>

Time and Date.com has a world clock for hundreds of cites around the globe. And, AFAIK accounts for all that summer/winter-time rule business. In a addition, time and date.com offers a wealth of information about, um, well...time and date stuff! ;-)

Enjoy.

DX list operations have been with us as long as I can remember. To the purist, they are sinful and almost criminal. To the "little pistol" they sometimes are the only way some countries can be worked.

I take no position other than to say that I have always relied upon my own equipment and capabilities - seems to bring more satisfaction that way.

You never used a DX Cluster George? I found them fun and even helped me with my first DXCC.

Tonight I'm so tired of messages saying why they will NEVER use what I set up today that I should take it down tonight. But instead I will leave it up over the weekend. If no-one uses it then I will turn it off.

Satellite transponders use morse code for FCC ID which is sent constatly.
More then likely the earth station receiver had it's audio slightly tuned
off the desired audio sub channel and the receiver was picking up the ID on
it's assigned sub audio channel. They could have also sratel tuned the
stereo channels so one of the L or R channels was tuned to the id and the
other L or R channel was tunned to one of the two program L or R channels.
Or. the earth station receiver could have been set in wide band mode rather
then narrow band mode and picked up the next sub channel such as the ID
along with the programming audio channnel.

Gang:

It's only a few short weeks until the Winter FOX Hunt gets underway. We will actually begin on Tuesday, October 28, with the first pair of hunts. Thanks to all who have volunteered to serve as FOXes, and to everyone who

will be hunters. Watch for a posting tomorrow giving all the details, including the web site info.

For now, get those rigs and antennas tweaked up for 40 Metres. Also, be sure to notify Bruce VE5RC of your plans for teams this season.

Man oh man, I have hardly wait for it all to begin again! See you soon.

Leave it up for a bit longer Karl...it takes folks a while to try new and radical technology.

I think that if BPL is that close to your QTH separate transformers
won't help much. We're not so much concerned about transmission through
the power line into the rig as we are about radiation into the antenna
terminals.

Now just hang on a second - I do *my* hobby the way I want to, within the
licence conditions. For contests and awards there are rules, and they're
fine. But when I want to operate, please give me the freedom to use the
cluster, skeds, whatever I want.

One of the great things about ham radio is - within fairly stringent and
technical rules - the richness and variety of the hobby. Personally I do not

use the cluster, not because I do not think it is 'wrong' or against some general ethical code, but because I would sooner try to develop my own operator skills for finding DX.

However it is wrong for old or young farts to try to impose their view of the hobby on everyone else. Karl has made a worthwhile offer that I for one will be taking advantage of. As I have said before, I find it hard to work 2-way QRP simply because I very seldom come across other QRP stations. I suspect that I am not the only person who finds this. I am therefore likely to rely on skeds, and this type of list, for 2-way QRP QSOs. Is that 'cheating', or morally, ethically, or technically 'wrong'? Are QRP contests and activity days also 'wrong' because they make it more likely that you'll work other QRP stations?

So let's live and let live on this one. If you don't want to use it, then please don't moan on about your high moral standards unless you can swear that you have never *ever* arranged a sked, made others aware of the fact that you intend operating at a particular time or frequency, etc. And if you really can do all those things, please bathe in your private satisfaction.

72,
Howard.

I don't know Laura, The US Naval observatory makes a good argument that is
does indeed stand for something; see their site:
<http://aa.usno.navy.mil/faq/docs/UT.html>

They could be incorrect too, but I've always seen it as "coordinated
universal time" or if you want to go with the acronym, "universal time
coordinated". Where exactly are you getting your information from as I would
like to read about it. I won't lose any sleep over it, but it is kind of
interesting in a not interesting way if you catch my meaning.

My wife thinks I have all kinds of useless trivial information stored in the
old brain, and that I can't remember what we talked about last week (not
true) and I don't know what gives her that opinion.

73,
Tom

I bought a spool of nylon twine for field day and we used it to
hold up our 88 foot dipoles. I had a snarled mass of twine on the floor
yesterday and wanted to get 3 lines about 50 feet long to raise our 40
meter coax fed backpack antenna. I spent an hour getting 3 lines free
from the mass, and then asked myself, how can I roll this up so it will

not be a mess whan we get into the Wilderness?

I then thought about the big balls of string my Grandfather had. He would get kit string or anything and roll it up on a ball the would get to be 4-6 inches in diameter!

So started the ball on two fingers and then took that off the fingers and started rolling up the twine on the part that was on my fingers. Kept at it reversing the part you wind on back and forth and then the end of the twine showed up. It is 50 feet of twine in a 3 inch ball. Will be very easy to un-wind in the Wilderness Wednesday evening.

Fellow QRP'ers,

You are invited to listen for a QRSS (very slow speed) 100mW experimental beacon on 30M this weekend. What's QRSS? Pse refer to W0CH's website for the scoop: www.w0ch.net/qrss/qrss.htm

Time from now through Monday, Oct 6 (ending 11:00UTC Monday)
Freq 10.140.130 hz (measured against WWV on 10.000.000)
Mode QRSS10
Power 100mW
TX Wilderness Sierra with outboard DDS in temp controlled oven
Ant 30M dipole up 18M, fed with open line

Beacon String: Callsign ID and power announcement sent at 12WPM, followed by 5 letter QRSS10 codeword

If no one hears the 100mW beacon by Sunday morning, I'll QRO to 200mW. I would be very interested in your reception reports, either "aye" or "nay." I'll post results to this group.

Happy listening! Paul, AA4XX Raleigh, North Carolina

There are 13 members to this list. It is growing about like I should expect. All of you old duffers who hate to admit it would be nice to talk to a Russian and maybe make a qrp to qrp contact. This IS kind

of new.

I have got many good ideas from people who have run lists before me. I choose to let things happen, not all good, with the setup I know have and make changes that are needed when they are needed. The Yahoo list provides the list owner a lot of nice tools.

You can look at it with your browser at:

<http://groups.yahoo.com/group/qrpdx/>

Many think world-wide DXpeditioner OH2BH is probably the reason for
that particular ring. I believe you'll also find he's in the Nokia
hierarchy.

I hear it in Buffalo on a Sony ICF-2010 with a whip antenna. I could copy the slow message by ear if I took the time! Signal is just above the noise with this setup.

I got tapped to present a program on QRP at my local club in a few weeks and I want to give the members a list of books, resources on the internet and other possibilities for finding more information in case I manage to trigger anyone's interest. Anybody got any inputs I can use?

The beacon is running an S7 here in NJ. I copied the CW ID, but I can't get my stupid Soundcard working with Argo.
